GLOWA Jordan River Project

[Site ToC » Home]

Welcome to GLOWA Jordan River

GLOWA Jordan River (GLOWA JR) is an interdisciplinary and international research project providing scientific support for sustainable water management in the Jordan River region. See also the [GLOWA JR Flyer](#).

Our central question is

How can the benefits from the region's water be maximized for humans and ecosystems, under global change?

Take a look at our [GLOWA JR Products](#) or our [newest scientific publications](#) to find out more about the relevant results of the project concerning the **effects of climate and global change in the Jordan River basin**.

GLOWA JR is financed by the [German Federal Ministry of Education and Research \(BMBWF\)](#) as part of the [GLOWA](#) research initiative: Global Change in Hydrological Cycle. The project is coordinated by the [Department of Plant Ecology](#) of the University of Tübingen, Germany.
